# Product Name: IntraLATA Presubscription

## OVERVIEW

### Description

- IntraLATA Presubscription is the presubscription option for IntraLATA toll. Under IntraLATA Presubscription, the end users have the ability to preselect an Interexchange Carrier (IXC) for IntraLATA toll calls, just as they have the option to preselect an IXC for InterLATA toll calls. See [Dial 1 Plus](#) for more information on InterLATA options.
- 2PIC and LPIC (Local Primary Interexchange Carrier) are terms commonly used to refer to the local toll provider option selected by an end user.
- All end users in the states within Ameritech's territory (Illinois, Indiana, Michigan, Ohio and Wisconsin) have the option of selecting an IXC other than Ameritech to handle their IntraLATA calling. Effective 5/12/99, Michigan has 100% LPIC availability.
- In all states, a Telecommunications Carrier (TC) may resell Ameritech's IntraLATA toll service under the Telecommunications Carrier's name.
- See [Account Protection](#) for information on protecting an end user's account from Local Primary Interexchange Carrier (LPIC) changes.

### Aliases

- IntraLATA Equal Access
- IntraLATA Dialing Parity
- Local PIC
- LPIC
- Predesignated Interexchange Carrier
- 2PIC (Presubscribed Interexchange Carrier)

### Features

- Dialing parity is defined as 'the capability to dial a single-digit to initiate an IntraLATA long distance call.'
- Without IntraLATA Presubscription, Ameritech automatically carries all 1+ IntraLATA message telecommunication service traffic unless the end user opts to 'dial around' by dialing 101XXXX. If Ameritech carries the IntraLATA toll traffic, the TC will receive daily usage information from Ameritech and will be billed the wholesale rate for the usage. With IntraLATA Presubscription, end users may select a different IXC for 1+ IntraLATA traffic, which

means no longer having to dial 101XXXX, or choose Ameritech as their IntraLATA toll Carrier.

- If the TC does not indicate another preference for a provider of IntraLATA services, Ameritech will carry the traffic and bill the TC at the wholesale rate.

## How to Use the Product

- Not applicable.

## AVAILABILITY

- IntraLATA Presubscription is presently available in all of Illinois, Indiana, Michigan, Ohio and Wisconsin. Effective 5/12/99, Michigan has 100% 2PIC availability.
- Interzone calling in Michigan is subject to IntraLATA dialing parity.

## Restrictions/Limitations

- The following call types are excluded from IntraLATA Presubscription:
  - Local calls
  - Directory Assistance
  - Repair
  - 911
  - 976 or local pay-per-call
- In Michigan and Wisconsin, Ameritech is the only IntraLATA Carrier allowed on Ameritech resold semi-public and public pay phone accounts in exchanges where IntraLATA presubscription has been implemented.
- In Wisconsin, end users subscribing to One Way Optional Service are excluded from IntraLATA presubscription for calls made to Milwaukee Metro Area exchanges.
- In Illinois, the following intraMSA (Market Service Area) calls are not subject to presubscription if the call originates and terminates within the geographic area that Ameritech provides calling through:
  - Flat rate service, such as found in Liberty (217-645), Fowler (217-434) or Forrest (815-657)
  - Residence untimed calling and usage measured service bands that do not exceed 15 miles from the exchange wire center.
  - Flat rate or measured Extended Area Service

## Interactions

- Not applicable.

**Required Companion Products**

- Not applicable.

**Conflicting Products**

- Not applicable.

**ORDERING****Due Dates**

- Changing IntraLATA carrier on a Change order:

<b>If request processed:</b>	<b>Then earliest due date is:</b>
before 3 PM, CT	same day
after 3 PM, CT	next business day

- Establish IntraLATA carrier on a New or Move order:

<b>If request is:</b>	<b>And request processed</b>	<b>Then earliest due date is:</b>
non-premises visit	before 3PM, CT	2 business days
	after 3PM, CT	3 business days
premises visit	----->	Desired due date.  If desired due date is not available, the next available due date will be assigned.  - or -

		If you have access to EDI Pre-ordering Interface, check Due Date/Reservation application.
--	--	---

### Class of Service/CLS

- Not applicable.

### USOCs

- Not applicable.

### FIDs

- The FID LPIC (Local PIC) and an associated code indicates the end user's primary selection or no selection of a carrier for IntraLATA toll calls.
- See the Feature Availability database for a list of 2PIC codes to be used. See the Electronic Services Ordering Guide (ESOG) for additional information.
- A 2PIC is required on all eligible lines.
- A 2PIC is required once per line USOC.
- Use the following codes for end users who do not select a 2PIC:

Code	Description
UNDC	End user is undecided on a primary IntraLATA carrier selection (1 + intraLATA telephone number is blocked)
NONE	End user chooses not to select a primary IntraLATA carrier (1 + intraLATA telephone number is blocked)

- Use either of the following codes for end users who wish to select Ameritech as their 2PIC:

Code	Description
A13	ACNA for Ameritech intraLATA

9999	CIC for Ameritech intraLATA
------	-----------------------------

## Miscellaneous Ordering Procedures

- Not applicable.

## Resale Order Form Examples

# BILLING

## Charges

- Charges will be assessed if order is placed by Telecommunications Carrier (TC) non-electronically

## Nonrecurring Charges

- Effective 5/8/99 in Illinois, Indiana, and Michigan and effective 6/12/99 in Wisconsin: The 2PIC change charge for additional lines is increased. There is no longer a **reduced** 2PIC change charge applied to additional lines on a multi-line account. The normal 2PIC change charge will be applied to the main and any additional lines on a multi-line account.
  - In Ohio, the **reduced** 2PIC change charge is still applied to additional lines on a multi-line account on the same order. Additional line means the 2nd line (and any additional lines -- 3rd line, 4th line, etc.) having a 2PIC change on one order for a multi-line account.
  - Example: An end user in Ohio has a multi-line account with 1 primary line and 2 additional lines. The end user places one order to change the 2PIC on the primary line and one additional line. The normal 2PIC change charge will be applied to the primary line and the **reduced** 2PIC change charge will be applied to the additional line.
  - Example: An end user in Ohio has a multi-line account with 1 primary line and 2 additional lines. The end user places one order to change the 2PIC on one additional line. The **normal** 2PIC change charge will be applied to the additional line.

## Illinois

- The Commission found that it is appropriate to provide each end user one free change of intraLATA Carrier for a period of six months after intraLATA equal access is implemented

in that end user's exchange.

- Subsequent changes in the intraLATA Carrier whether before or after changing local service providers, as well as initial changes after the six month period has expired, will be subject to the PIC change charge.
- Charges for an intraLATA PIC change will be the same as existing charges for an interLATA PIC change.
- If an end user with one line changes both their intraLATA and interLATA Carrier to two DIFFERENT Carriers, the end user will be billed two PIC change charges. However, if an end user changes both their intraLATA and interLATA Carrier and it is the SAME Carrier, only one PIC change charge would apply.

#### Indiana

- An end user's **first** IntraLATA Carrier change will be made at no charge from February 8, 1999 until August 8, 1999.
- Subsequent changes in an IntraLATA Carrier will be subject to the PIC change charge.

#### Michigan

- During the conversion of the first 70% of the Michigan area to IntraLATA presubscription, an end user will receive 'free' 2PIC (not PIC) changes 90 days prior to switch activation, and the first 2PIC change within the first 90 days following the switch activation date.
- Effective 5/12/99, the remaining 30% of the Michigan area will have 2PIC availability. End users affected by the remaining 30% of Michigan becoming 2PIC available are eligible to receive their first 2PIC change for 'free' during a 90-day period from 5/12/99 to 8/10/99. Subsequent 2PIC changes will be applied a 2PIC change charge, even for orders completed within the 90-day period.
- If an end user changes both their IntraLATA and InterLATA PIC, it would result in two PIC change charges.
- Charges for an intraLATA PIC change are the same as the charges for an InterLATA PIC change.

#### Ohio

- An end user's **first** IntraLATA Carrier change will be made at no charge from February 8, 1999 through May 9, 1999.
- Subsequent changes in the IntraLATA Carrier will be subject to the PIC change charge.

## Wisconsin

- The Wisconsin Public Service Commission found that it is appropriate to provide each end user one free change of IntraLATA Carrier for a period of one year after IntraLATA equal access is implemented in that end user's exchange.
- Subsequent changes in the IntraLATA Carrier, whether before or after changing local service providers, as well as initial changes after the one-year period has expired, will be subject to the PIC change charge.
- Charges for an IntraLATA PIC change will be the same as existing charges for an InterLATA change.
- If an end user changes both their IntraLATA and InterLATA Carrier, it would result in two PIC change charges whether before or after changing local service providers.
